Fall Scavenger Hunt

Water Tower

Did you know a water tower does more than just store water? It's actually a pressurized distribution system for the groundwater below us! Water is pumped into the reservoir; then, whenever we turn on the tap, the resulting pressure forces the water to come to us. Fun fact: the water tower must be taller than the highest buildings in town in order for gravity to pull the water to their top floor!

Clues for next step:

- Your next stop is a popular destination on Sundays for its congregation.
- This is the only Catholic Church in Longport.
- Head down 31st Avenue towards Ventnor Avenue; turn left at Ventnor Avenue. Your next stop is .3 miles on your right; if you reach the bridge, you've gone too far!
